

Sources documenting changes from my area:

- The spreading of so called “neophytes” like the *Impatiens glandulifera*

- The spreading of the Oak processionary in northern areas – walking on the Kanal in Erlangen makes u fear the oaks
- Winter getting warmer and less snowy/icy in general

Picture showing my grandmother in the winter of 1956 – one of the coldest winters so far – narratives told me that the winters in the 50s and early 60s were very cold; there is even a story that they used jackhammers and other stuff to dig graves as the soil was that frozen.

Picture showing Amberg in the Winter of 1940 also one of the harshest winters – not only due to WWII.(credit: Stadtarchiv Amberg)

Sources I remembered/found by accident not from my area:

- “Earth Song” song by Michael Jackson documenting the human driven environmental destruction
- “Landscape is changing” song by Depeche Mode also reporting the environmental destruction
- “Kreidefelsen auf Rügen” painting by Caspar David Friedrich showing -compared to now- the erosion of the Königsstuhl, which is also increased by acid rains etc.
